

Cisco Certified Design Associate (CCDA)

Table of Contents

Part I General Network Design

Chapter 1 Network Design Methodology

- Intelligent Information Network and Service-Oriented Network Architecture
 - IIN Framework
 - SONA
 - Network Infrastructure Layer
 - Interactive Service Layer
 - Application Layer
 - Benefits of SONA
- Prepare, Plan, Design, Implement, Operate, and Optimize Phases
 - Prepare Phase
 - Plan Phase
 - Design Phase
 - Implement Phase
 - Operate Phase
 - Optimize Phase
 - Design Methodology Under PPDIOO
- Identifying Customer Requirements
- Characterizing the Existing Network
 - Steps in Gathering Information
 - Network Audit Tools
 - Network Analysis Tools
 - Network Checklist
- Designing the Network Topology and Solutions
 - Top-Down Approach
 - Pilot and Prototype Tests
 - Design Document

Chapter 2 Network Structure Models

- Hierarchical Network Models
 - Benefits of the Hierarchical Model
 - Hierarchical Network Design
 - Core Layer
 - Distribution Layer
 - Access Layer
- Hierarchical Model Examples
- Cisco Enterprise Architecture Model
 - Enterprise Campus Module
 - Enterprise Edge Module
 - E-Commerce
 - Internet Edge
 - VPN/Remote Access
 - Enterprise WAN
- Service Provider (SP) Edge Module
- Remote Modules
 - Enterprise Branch Module
 - Enterprise Data Center Module
 - Enterprise Teleworker Module
- Network Availability
 - Workstation-to-Router Redundancy
 - ARP
 - Explicit Configuration
 - RDP
 - RIP
 - HSRP
 - GLBP
- Server Redundancy
- Route Redundancy
 - Load Balancing
 - Increasing Availability

- Media Redundancy

Part II LAN and WAN Design

Chapter 3 Enterprise LAN Design

- LAN Media
 - Ethernet Design Rules
 - 10-Mbps Fiber Ethernet Design Rules
 - 100-Mbps Fast Ethernet Design Rules
- Gigabit Ethernet Design Rules
 - 1000BASE-LX Long-Wavelength Gigabit Ethernet
 - 1000BASE-SX Short-Wavelength Gigabit Ethernet
 - 1000BASE-CX Gigabit Ethernet over Coaxial Cable
 - 1000BASE-T Gigabit Ethernet over UTP
- 10 Gigabit Ethernet (10GE) Design Rules
 - 10GE Media Types
- Fast EtherChannel
- Token Ring Design Rules
- LAN Hardware
 - Repeaters
 - Hubs
 - Bridges
 - Switches
 - Routers
 - Layer 3 Switches
- LAN Design Types and Models
- Best Practices for Hierarchical Layers
 - Access Layer Best Practices
 - Distribution Layer Best Practices
 - Core Layer Best Practices
- Large-Building LANs
- Enterprise Campus LANs
 - Edge Distribution
- Medium Site LANs
- Small and Remote Site LANs
- Server-Farm Module
 - Server Connectivity Options
- Enterprise Data Center Infrastructure
- Campus LAN Quality of Service Considerations
- Multicast Traffic Considerations
 - CGMP
 - IGMP Snooping

Chapter 4 Wireless LAN Design

- Wireless LAN Technologies
 - Wireless LAN Standards
 - ISM and UNII Frequencies
 - Service Set Identifier (SSID)
 - WLAN Layer 2 Access Method
 - WLAN Security
 - Unauthorized Access
 - WLAN Security Design Approach
 - IEEE 802.1X-2001 Port-Based Authentication
 - Dynamic WEP Keys and LEAP
 - Controlling WLAN Access to Servers
- Cisco Unified Wireless Network
- Cisco UWN Architecture
 - LWAPP
 - LWAPP Access Point Modes
 - LWAPP Discovery
 - WLAN Authentication
 - Authentication Options
 - WLAN Controller Components
 - WLC Interface Types
 - AP Controller Equipment Scaling
 - Roaming and Mobility Groups

- Intracontroller Roaming
- Layer 2 Intercontroller Roaming
- Layer 3 Intercontroller Roaming
- Mobility Groups
- Wireless LAN Design
 - Controller Redundancy Design
 - N+1 WLC Redundancy
 - N+N WLC Redundancy
 - N+N+1 WLC Redundancy
- Radio Management and Radio Groups
 - Radio Frequency (RF) Groups
- RF Site Survey
- Using EoIP Tunnels for Guest Services
- Wireless Mesh for Outdoor Wireless
 - Mesh Design Recommendations
- Campus Design Considerations
- Branch Design Considerations
 - Local MAC
 - REAP
 - Hybrid REAP
 - Branch Office Controller Options

Chapter 5 WAN Technologies

- WAN Defined
- WAN Connection Modules
- WAN Comparison
 - Dialup
 - ISDN
 - Frame Relay
 - Time-Division Multiplexing
 - SONET/SDH
 - Multiprotocol Label Switching
- Other WAN Technologies
 - Digital Subscriber Line
 - Cable
 - Wireless
 - Dark Fiber
 - Dense Wave Division Multiplexing
- Ordering WAN Technology and Contracts
- WAN Design Methodology
 - Response Time
 - Throughput
 - Reliability
 - Bandwidth Considerations
 - Window Size
 - Data Compression
- Optimizing Bandwidth Using QoS
 - Queuing, Traffic Shaping, and Policing
 - Priority Queuing
 - Custom Queuing
 - Weighted Fair Queuing
 - Class-Based Weighted Fair Queuing
 - Low-Latency Queuing
 - Traffic Shaping and Policing

Chapter 6 WAN Design

- Traditional WAN Technologies
 - WAN Topologies
 - Hub-and-Spoke Topology
 - Full-Mesh Topology
 - Partial-Mesh Topology
- Remote-Access Network Design
- VPN Network Design
 - Overlay VPNs
 - Virtual Private Dialup Networks
 - Peer-to-Peer VPNs
 - VPN Benefits

- WAN Backup Design
 - Load-Balancing Guidelines
 - WAN Backup over the Internet
- Layer 3 Tunneling
- Enterprise WAN Architecture
 - Cisco Enterprise MAN/WAN
 - Enterprise WAN/MAN Architecture Comparison
- Enterprise Edge Components
 - Hardware Selection
 - Software Selection
 - Cisco IOS Packaging
 - Comparing Hardware and Software
- Enterprise Branch Architecture
 - Branch Design
 - Enterprise Branch Profiles
 - Single-Tier Design
 - Dual-Tier Design
 - Multi-Tier Design
 - Enterprise Teleworker (Branch of One) Design

Part III The Internet Protocol and Routing Protocols

Chapter 7 Internet Protocol Version 4

- IPv4 Header
 - ToS
 - IPv4 Fragmentation
- IPv4 Addressing
 - IPv4 Address Classes
 - Class A Addresses
 - Class B Addresses
 - Class C Addresses
 - Class D Addresses
 - Class E Addresses
- IPv4 Private Addresses
- NAT
- IPv4 Address Subnets
 - Mask Nomenclature
 - IP Address Subnet Design Example
 - Determining the Network Portion of an IP Address
 - VLSMs
 - VLSM Address-Assignment Example
 - Loopback Addresses
 - IP Telephony Networks
 - CIDR and Summarization
- Address Assignment and Name Resolution
- Static and Dynamic IP Address Assignment
 - BOOTP
 - DHCP
 - DNS
 - ARP

Chapter 8 Internet Protocol Version 6

- Introduction to IPv6
- IPv6 Header
- IPv6 Address Representation
 - IPv4-Compatible IPv6 Addresses
 - IPv6 Prefix Representation
- IPv6 Address Types and Address Allocations
 - IPv6 Unicast Address
 - IPv6 Anycast Address
 - IPv6 Multicast Address
 - IPv6 Address Allocations
 - Unspecified Address
 - Loopback Address
 - IPv4-Compatible IPv6 Address
 - Global Unicast Addresses

- Link-Local Addresses
 - Site-Local Addresses
 - Multicast Addresses
- IPv6 Mechanisms
 - ICMPv6
 - IPv6 Network Discovery (ND) Protocol
 - IPv6 Name Resolution
 - Path MTU Discovery
- IPv6 Address-Assignment Strategies
 - Autoconfiguration of Link-Local Address
 - DHCPv6
- IPv6 Security
- IPv6 Routing Protocols
 - RIPng for IPv6
 - EIGRP for IPv6
 - OSPFv3 for IPv6
 - IS-IS for IPv6
 - BGP4 Multiprotocol Extensions for IPv6
- IPv4 to IPv6 Transition Strategies and Deployments
 - IPv6 over Dedicated WAN Links
 - IPv6 over IPv4 Tunnels
 - Dual-Stack Backbones
 - Dual-Stack Hosts
 - Protocol Translation Mechanisms
- IPv6 Comparison with IPv4

Chapter 9 Routing Protocol Selection Criteria

- Routing Protocol Characteristics
 - Static Versus Dynamic Route Assignment
 - Interior Versus Exterior Routing Protocols
 - Distance-Vector Routing Protocols
 - EIGRP
 - Link-State Routing Protocols
 - Distance-Vector Routing Protocols Versus Link-State Protocols
 - Hierarchical Versus Flat Routing Protocols
 - Classless Versus Classful Routing Protocols
 - IPv4 Versus IPv6 Routing Protocols
 - Administrative Distance
- Routing Protocol Metrics and Loop Prevention
 - Hop Count
 - Bandwidth
 - Cost
 - Load
 - Delay
 - Reliability
 - Maximum Transmission Unit (MTU)
 - Routing Loop-Prevention Schemes
 - Split Horizon
 - Split Horizon with Poison Reverse
 - Counting to Infinity
 - Triggered Updates
 - ODR

Chapter 10 RIP and EIGRP Characteristics and Design

- RIPv1
 - RIPv1 Forwarding Information Base
 - RIPv1 Message Format
 - RIPv1 Timers
 - Update Timer
 - Invalid Timer
 - Flush Timer
 - Holddown Timer
 - RIPv1 Design
- RIPv2
 - Authentication
 - MD5 Authentication
 - RIPv2 Forwarding Information Base

- RIPv2 Message Format
- RIPv2 Timers
- RIPv2 Design
- RIPv2
 - RIPv2 Timers
 - Authentication
 - RIPv2 Message Format
 - RIPv2 Design
- IGRP
 - IGRP Timers
 - IGRP Metrics
 - IGRP Design
- EIGRP for IPv4 Networks
 - EIGRP Components
 - Protocol-Dependent Modules
 - Neighbor Discovery and Recovery
 - RTP
 - DUAL
 - EIGRP Timers
 - EIGRP Metrics
 - EIGRP Packet Types
 - EIGRP Design
- EIGRP for IPv6 Networks
 - EIGRP for IPv6 Design

Chapter 11 OSPF and IS-IS

- OSPFv2
 - OSPFv2 Concepts and Design
 - OSPFv2 Metric
 - OSPFv2 Adjacencies and Hello Timers
 - OSPFv2 Areas
 - OSPF Router Types
 - OSPF DRs
 - LSA Types
 - OSPF Stub Area Types
 - Virtual Links
 - OSPFv2 Router Authentication
- OSPFv3
 - OSPFv3 Changes from OSPFv2
 - OSPFv3 Areas and Router Types
 - OSPFv3 Link State Advertisements
- IS-IS
 - IS-IS Metrics
 - IS-IS Operation and Design
 - NET
 - IS-IS DRs
 - IS-IS Areas
 - IS-IS Authentication
 - IS-IS for IPv6

Chapter 12 Border Gateway Protocol, Route Manipulation, and IP Multicast

- BGP
 - BGP Neighbors
 - eBGP
 - iBGP
- Route Reflectors
- Confederations
- BGP Administrative Distance
- BGP Attributes, Weight, and the BGP Decision Process
 - BGP Path Attributes
 - Next-Hop Attribute
 - Local Preference Attribute
 - Origin Attribute
 - AS Path Attribute
 - MED Attribute
 - Community Attribute
 - Atomic Aggregate and Aggregator Attributes

- Weight
- BGP Decision Process
- Route Manipulation
 - PBR
 - Route Redistribution
 - Default Metric
 - OSPF Redistribution
- IP Multicast Review
 - Multicast Addresses
 - Layer 3 to Layer 2 Mapping
 - IGMP
 - IGMPv1
 - IGMPv2
 - IGMPv3
 - CGMP
 - IGMP Snooping
- Sparse Versus Dense Multicast Routing Protocols
- Multicast Source and Shared Trees
- PIM
 - PIM-SM
 - PIM DR
 - Auto-RP
 - PIMv2 Bootstrap Router
- DVMRP
- IPv6 Multicast Addresses
- Route Redistribution
- IP Multicast

Part IV Security, Convergence, and Network Management

Chapter 13 Security Management

- Security Legislation
- Security Threats
 - Reconnaissance and Port Scanning
 - Vulnerability Scanners
 - Unauthorized Access
- Security Risks
 - Targets
 - Loss of Availability
 - Integrity Violations and Confidentiality Breaches
- Security Policy and Process
 - Security Policy Defined
 - Basic Approach of a Security Policy
 - Purpose of Security Policies
 - Security Policy Components
 - Risk Assessment
 - Continuous Security
 - Integrating Security Mechanisms into Network Design
- Trust and Identity Management
 - Trust
 - Domains of Trust
 - Identity
 - Passwords
 - Tokens
 - Certificates
 - Access Control
- Secure Connectivity
 - Encryption Fundamentals
 - Encryption Keys
 - VPN Protocols
 - Transmission Confidentiality
 - Data Integrity
- Threat Defense
 - Physical Security
 - Infrastructure Protection

Chapter 14 Security Technologies and Design

- Cisco Self-Defending Network
 - Network Security Platforms
 - Self-Defending Network Phases
- Trust and Identity Technologies
 - Firewall ACLs
 - NAC Framework and Appliance
 - Cisco Identity-Based Network Services
 - Identity and Access Control Deployments
- Detecting and Mitigating Threats
 - Threat Detection and Mitigation Technologies
 - Threat Detection and Mitigation Solutions
- Security Management Applications
 - Security Platform Solutions
- Integrating Security into Network Devices
 - IOS Security
 - ISR Security Hardware Options
 - Cisco Security Appliances
 - Intrusion Prevention
 - Catalyst 6500 Services Modules
 - Endpoint Security
- Securing the Enterprise
 - Implementing Security in the Campus
 - Implementing Security in the Data Center
 - Implementing Security in the Enterprise Edge and WAN

Chapter 15 Traditional Voice Architectures and IP Telephony Design

- Traditional Voice Architectures
 - PBX and PSTN Switches
 - Local Loop and Trunks
 - Ports
 - Major Analog and Digital Signaling Types
 - Loop-Start Signaling
 - Ground-Start Signaling
 - E&M Signaling
 - CAS and CCS Signaling
- PSTN Numbering Plan
- Other PSTN Services
 - Centrex Services
 - Voice Mail
 - Database Services
 - IVR
 - ACD
 - Voice Terminology
 - Grade of Service
 - Erlangs
 - Centum Call Second (CCS)
 - Busy Hour
 - Busy Hour Traffic (BHT)
 - Blocking Probability
 - Call Detail Records
- Integrated Multiservice Networks
 - VoFR
 - VoATM
 - VoIP
 - IPT Components
 - Design Goals of IP Telephony
- IPT Deployment Models
 - Single-Site Deployment
 - Multisite Centralized WAN Call-Processing Model
 - Multisite Distributed WAN Call-Processing Model
 - Unified CallManager Express Deployments
- Codecs
 - Analog-to-Digital Signal Conversion
 - Codec Standards

- VoIP Control and Transport Protocols
 - DHCP, DNS, and TFTP
 - SSCP
 - RTP and RTCP
 - MGCP
 - H.323
 - SIP
- IPT Design
 - Bandwidth
 - VAD
- Delay Components
- QoS Mechanisms for VoIP Networks
 - CRTP
 - LFI
 - PQ-WFQ
 - LLQ
 - Auto QoS
 - IPT Design Recommendations

Chapter 16 Network Management Protocols

- SNMP
 - SNMP Components
 - MIB
 - SNMP Message Types
 - SNMPv1
 - SNMPv2
 - SNMPv3
- Other Network Management Technologies
 - RMON
 - RMON2
 - NetFlow
 - NetFlow Compared to RMON
 - CDP
 - Syslog
